Certification of Residual Thiosulfate Level

On 4/26 1990, microfilm roll # 1419 of

City of New York

was tested for residual thiosulfate using the
Methylene Blue Method for Measuring Thiosulfate
as described in American National Standards

Institute Standard IT 9.1. Results of the
test indicate a residual thiosulfate level of

.0036 g S₂O₃/m². This is within the archival
limit of .014 g/m² specified for archival
quality microfilm products.

A color calibration target, likely a Munsell Color Services Lab chart, featuring a grayscale step wedge and color patches. The grayscale steps are labeled 1 through 10, with corresponding numerical values for density and colorimetric properties. The color patches are labeled with their respective Munsell colorimetric values (L*, a*, b*) and are arranged in a grid.

A 4x4 grid of 16 grayscale calibration targets. Each target consists of a small square with a grayscale gradient and a numerical label. The labels are arranged in a 4x4 grid, with the top row containing 1, 2, 3, 4, the second row 5, 6, 7, 8, the third row 9, 10, 11, 12, and the bottom row 13, 14, 15, 16. The targets are used for color and grayscale calibration in digital imaging.

A color calibration target, likely a Munsell Color Services Lab chart, featuring a grayscale step wedge and color patches. The grayscale steps are labeled 1 through 10, with 1 being the lightest and 10 being the darkest. The color patches are labeled with their respective Munsell colorimetric values (hue, chroma, and brightness).

A color calibration chart featuring a series of color patches and grayscale steps. The patches include primary colors (red, green, blue), skin tones, and a grayscale ramp from black to white. Numerical values are printed next to each patch, likely representing colorimetric data such as L*a*b* or density values.

A color calibration target, likely a Munsell Color Services Lab chart, featuring a grayscale step wedge and color patches. The grayscale steps are labeled 1.0, 2.0, 3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, and 10.0. The color patches are labeled with Munsell colorimetric values (hue, chroma, brightness) and include a 'D50 Illuminant, 2 degree observer' note.

A color calibration target, likely a Munsell Color Services Lab chart, featuring a grayscale step wedge and color patches. The grayscale patches are labeled with numbers 1 through 25, with 1 being the lightest and 25 being the darkest. The color patches are labeled with letters A through F, representing various primary and secondary colors. The chart is used to ensure color accuracy and consistency in digital imaging and printing.

A large, stylized graphic of a calendar page. The word "FEB" is at the top in large, bold, black letters. Below it, the word "JUN" is also in large, bold, black letters. The background is a light, textured surface, possibly representing a calendar page or a wall. The overall design is minimalist and modern.

A 3x3 grid of numbers from 1 to 9, rotated 45 degrees clockwise. The numbers are arranged in a pattern that suggests a magic square, but the specific values are not clearly legible due to the rotation and image quality.
